1 DRIVER / REASON FOR SHIELDS

Briefly explain why shields are being considered—for example, an accident or incident, insurance or regulatory requirement, corporate directive, or hazardous-area zoning. This helps us identify the correct solution.

2 PURPOSE

Tell us what you expect from the shield. The main purpose is typically to prevent spray-out rather than contain the leak. Other requirements may include oil-mist control, visual leak indication, full containment, or diversion through drains.

3 SCOPE

List the process lines requiring shields and, where appropriate, the process temperature and pressure (for example: 98% sulphuric acid; hydraulic oil at 100 bar; thermal oil at 250°C).
